## TECHNICAL ORDERS

Air Corps Technical Orders are directives published by order of the Chief of the Air Corps for the purpose of issuing specific instructions and information of a technical nature covering the operation, maintenance, storage, inspection, etc., of Army Air Force equipment and materials as authorized by Army Air Force Regulations, and for the establishment of a uniform system of files wherein such data will be readily accessible.

Active Technical Orders are revised from time to time to keep them up to date and to combine wherever possible each group of related subjects into one Technical Order. Revised pages listing all new or revised publications issued and those rescinded or replaced are published monthly. Each change listed on the revised pages is marked with an asterisk so that all revisions are readily apparent. A loose-leaf index titled, "Index of Technical Instructions and Information", lists all active Technical Orders and current revisions. From this index, with the use of following identifying series of numbers for each class of equipment, together with the manufacturers' number, all specific information covering Air Corps materials and equipment is found.
